INTRACUTANEOUS IMMUNOTHERAPY OF ACTINO-

DESCRIPTORS: Antigen, Antibodies, *Immunology,

Infections.

The actinolytic introduced intracutaneously shows a
good therapeutic effect in the majority of forms of
actinomycosis in the presence of a clear skin-allergy
reaction in the patient. The proposed method gives not
only a good therapeutic effect, but also good cosmetic
results. (Author)

DESCRIPTORS: Diagnosis, *Peptic ulcers, *Cancer, Stomach, Tests, *Penicillins, Therapy, Gastrointestinal system, Ulcers.

Since no absolute methods of differentiating benign gastric ulcers from those having undergone malignant transformation, this problem is usually resolved by a process of prolonged dynamic study with conservative therapy which, at times, can result in the wait having been too disastrously long. The distant or late results in the 3 cases of tran-
sthoracic esophagogastronomy performed for cardio-
spasm were good. There must be taken into account
the fact that a portion of the stomach has been
laced into the pleural cavity. Remembering this,
will help in preventing such diagnostic errors as
pleurisy and, if effusion does develop, complica-
tions of pleural puncture can be prevented. (Author)
